

◆ POST-AUDIT VENTURE STRATEGY & EVIDENCE-DRIVEN FINANCIAL BLUEPRINT

The Opportunity Matching Infrastructure for North Africa

An empirical, investor-grade memorandum analyzing the school-to-work transition, proprietary closed-loop recruitment architecture, multi-vertical expansion (MatchTalents, MatchArtists, MatchStudents), and the 50,000 TND commercial validation milestone round.

CORPORATE VEHICLE & STATUS

MatchOp SAS (Incorporation Pending in Mahdia, Tunisia)

STRATEGIC COLLABORATORS & PARTNERS

Hedi Ben Dhib, Oussema N. Nabaoui, Wafei N. Nabaoui

OWNERS / CO-FOUNDERS

Zied Fatnassi & Iheb Messabi (Sole Founders & Owners)

CURRENT STAGE BASELINE

Pre-Launch Development (0 Students, 3 Partner Accounts, 0 TND Rev)

01.

Document Classification & Methodology Standard

This memorandum serves as the definitive institutional investment proposal for **MatchOp**. To ensure complete intellectual honesty and meet international venture audit standards, every claim and projection is classified under strict evidential discipline:

[VERIFIED CURRENT FACT]

Audited codebase, Supabase production tables, and deployed infrastructure.

[MARKET DATA]

Official benchmarks from INS, Ministry of Higher Education, and Smart Capital.

[EARLY COLLABORATION INTEREST]

Pre-launch account creation and exploration without contracted revenue.

[MANAGEMENT ASSUMPTION / FORECAST]

Pro forma financial projections, pricing unit economics, and conversion rates.

[STRATEGIC TARGET / VALIDATION REQ]

Milestones required to confirm commercial traction across the 90-day pilot.

02.

Executive Summary: The North African Opportunity Challenge

The Graduate Paradox: Tunisia graduates over **54,381 students annually** [MARKET DATA] (including 3,110 engineers and 6,885 master's holders), yet university graduate unemployment stands at **26.6%** (35.6% for female graduates) and youth unemployment reaches **35.4%** (INS Q2 2026). Concurrently, the tech and SME ecosystem—comprising 1,165 labeled startups and hundreds of IT service firms (ESNs)—suffers acute junior talent bottlenecks driven by 25–35% annual senior engineer emigration to European markets.

The MatchOp Solution: MatchOp ([matchop.vercel.app](#)) replaces fragmented, low-signal job boards with an **algorithmic opportunity-matching exchange**. Utilizing 384-dimensional vector embeddings and document intelligence, MatchOp transforms unstructured CVs and certifications into verified skill profiles, delivering a pre-screened, ranked shortlist of top 5–10 candidates to employers within **48 to 72 hours**, reducing recruiter screening labor by >75%.

UNVARNISHED STRATEGIC BASELINE

MatchOp is operating in its

PRE-LAUNCH VALIDATION PHASE

with

0 REGISTERED STUDENTS AND 0 TND IN COMMERCIAL REVENUE

[VERIFIED CURRENT FACT] . Three organizations (Solution Creative Events, Nomade Arts, and Nexus) have registered platform accounts and signaled early collaboration interest [EARLY COLLABORATION INTEREST] , confirming early ecosystem demand across tech, creative, and training sectors.

03.

Key Investment Parameters & Snapshot

PARAMETER	VALUE / TARGET	STRATEGIC CONTEXT & EVIDENTIAL CLASSIFICATION
Pre-Seed Target Check	50,000 TND (~\$16,200 USD)	Milestone-based commercial validation tranche [MANAGEMENT INPUT]
Operating Runway	9 to 12 Months	Disciplined capital expenditure in Mahdia/Tunis [FORECAST]
Current Stage Baseline	Pre-Launch / MVP Built	Software fully deployed; commercial acquisition pending [VERIFIED CURRENT FACT]
B2B Monetization Core	280 TND/role 900 TND/yr	AI Candidate Shortlisting service for PMEs/ESNs [ASSUMPTION]
B2C Monetization Core	19 TND/mo 149 TND/yr	Student / Graduate Premium subscription [ASSUMPTION]
Key Pilot Milestone	15–20 Paying Employers	Proof of B2B willingness to pay and 3,000+ candidate signups [VALIDATION REQ]

04.

Company Overview, Ownership & Strategic Collaboration

Corporate Profile

Brand: MatchOp (« Match the Opportunity »)

Legal Structure: MatchOp SAS (Registration pending in Mahdia, Tunisia)

Operational Base: Mahdia, Republic of Tunisia

[MANAGEMENT INPUT]

Live Web Application: matchop.vercel.app

Primary Commercial Domain: HRTech, AI Shortlisting & Multi-Vertical Matching Infrastructure.

Owners & Co-Founders [CURRENT OWNERSHIP]

Zied Fatnassi — Co-Founder / Owner: Lead Architecture, System Design & Software Engineering (Core committer & product lead).

Iheb Messabi — Co-Founder / Owner: Full-Stack Platform Engineering, System Infrastructure & Core Committer.

**Zied Fatnassi and Iheb Messabi are the two sole owners and founders responsible for building, operating, and owning MatchOp.*

Strategic Collaborators & Ecosystem Partners [ECOSYSTEM PARTNERS]

Hedi Ben Dhieb: Strategic Collaborator & Ecosystem Partner (Ecosystem Strategy & Industry Networks).

Oussema N. Nabaoui: Strategic Collaborator & Ecosystem Partner (Operational Development & Partner Alignment).

Wafei N. Nabaoui: Strategic Collaborator & Ecosystem Partner (Field Operations & Strategic Outreach).

RIGOROUS GOVERNANCE DISTINCTION

Hedi Ben Dhieb, Oussema N. Nabaoui, and Wafei N. Nabaoui are strategic collaborators and ecosystem partners aligned with MatchOp's broader vision. Their involvement supports the development of MatchOp's future multi-vertical ecosystem. They are not equity owners, C-suite executive officers, or founding shareholders; their engagement reflects collaborative alignment during this pre-launch phase.

Post-Funding Legal Roadmap

- Registration of MatchOp SAS with the National Business Registry (RNE) in Mahdia.
- Formal application for the **Startup Act Label** via Smart Capital to access tax exonerations, customs facilities, and employment stipends.
- Execution of IP assignment agreements vesting all codebase, algorithms, and branding 100% in MatchOp SAS.

Data Protection & INPDP Standards

MatchOp is architected in full compliance with Tunisian Law No. 2004-63 regarding personal data protection (INPDP). All candidate CVs, identity data, and academic documents reside in encrypted Supabase storage with database-level Row Level Security (RLS).

05.

Current Development Stage Audit

A line-by-line audit of the MatchOp repository, database instances, and deployed services confirms an advanced, functional product baseline operating in a pre-launch state:

PLATFORM COMPONENT	CODEBASE VERIFICATION	CURRENT OPERATIONAL STATUS
Student Mobile Feed	src/components/discovery/VerticalOpportunityFeed.jsx	100% Functional (Framer Motion gestures, scope filters)
Matching & Vectors	supabase/functions/swipe-stack & pgvector	Operational (384-dimensional cosine similarity scoring)
External Job Scraper	scraper/matchop_scraper/ (Python 3.11)	Operational (Scrapling + Groq AI extraction into external_jobs)
B2B Employer Portal	src/pages/company/PostOffer.jsx & CompanyIntros.jsx	Implemented (Job creation, intro review, chat access)
Realtime Messaging	Supabase Realtime WebSockets	Live (Direct recruiter-candidate chat upon mutual intro)
Database State	Supabase Production PostgreSQL	0 Candidates, 3 Companies, 3 Offers, 0 TND Revenue [VERIFIED CURRENT FACT]

06. - 07.

The Problem & Structural Market Pain

Candidate Pain (Supply Side)

- **The Resume Black Hole:** Students spend 40+ hours per month submitting 50+ applications across job boards with a sub-10% response rate.
- **The Experience Paradox:** "Entry-level" roles demanding 2–3 years of experience automatically disqualify capable graduates whose capstones and skills are ignored.
- **Information Asymmetry:** Traditional portals provide zero constructive feedback on skill gaps, rejection rationales, or matching alignment.

Employer Pain (Demand Side)

- **Overwhelming Resume Noise:** Sifting through 200–500 unformatted, unqualified PDFs per job posting drains 15–25 hours of engineering manager time.
- **Severe Senior Attrition:** 25–35% annual senior developer brain drain to European markets requires tech firms to build continuous junior talent pipelines.
- **Prohibitive Legacy ATS Pricing:** Solutions like LinkedIn Recruiter (\$800+/seat/mo) are economically unviable for local-currency North African SMEs and PMEs.

THE MARKET INEFFICIENCY GAP

Tunisian employers do not suffer from a shortage of applicant volume; they suffer from *screening exhaustion*. MatchOp monetizes the elimination of this screening burden by delivering ranked candidate fit rather than raw applicant volume.

08.

The MatchOp Solution: Algorithmic Exchange

MatchOp replaces passive, low-conversion resume distribution with a closed-loop algorithmic exchange that pre-screens, vectors, and ranks junior candidates:

09. - 10.

Technology Architecture & Closed-Loop Engine

Frontend & Interaction Engine
Core Stack: React 19 SPA bootstrapped with Vite 7.
Mobile Experience: Framer Motion spring physics powering native gesture-driven opportunity discovery.
Localization: Full bilingual English/French interface via i18next.
Performance: Vercel Speed Insights tracking real user vitals (LCP < 1.2s).

Backend & Vector Intelligence
PostgreSQL 15 + pgvector: 384-dimensional vector embeddings for low-latency similarity ranking.
Row Level Security (RLS): Cryptographic multi-tenant data isolation at the database level.
Serverless Edge Functions: Deno runtime handling swipe matching, data sanitization, and AI polishing.

Native Workflow vs. External Discovery Liquidity

Workflow Dimension	Native MatchOp Roles (Offers)	External Aggregated Jobs (external_jobs)
Source of Opportunity	Directly posted by verified registered companies	Automated Python 3.11 Scrapling + Groq AI ingestion
Application Mechanism	In-app right swipe generates structured intro handshake	External redirect to source URL (new browser tab)
Data & Outcome Loop	Closed-loop: View → Swipe → Intro → Match → Hire	Outbound click tracking only; zero downstream outcome data
Commercial Monetization	100% Monetizable (280 TND shortlist / 900 TND plan)	0 TND Revenue (Pure top-of-funnel liquidity engine)

11.

The AI Candidate Ranking Differentiator

MatchOp's central technical moat is its **Document Intelligence and Skill Extraction Layer**. When a registered employer creates an internal MatchOp role, the system does not perform crude keyword searches. Instead, it analyzes candidate competency profiles enriched by uploaded verification documents:

Enriched Document Inputs

- **Academic CVs & Transcripts:** Coursework, capstones, and project descriptions.
- **Recognized Learning Credentials:** Course certificates from providers such as DataCamp, Coursera, NVIDIA Deep Learning Institute, Google Career Certificates, AWS, Oracle, and local training centers.
- **Project Portfolios:** GitHub repositories, technical live links, and capstone briefs.

Document Inspection Capabilities

1. **Skill Extraction:** Isolates technical competencies, frameworks, and tools.
2. **Profile Synthesis:** Maps unstructured text to a normalized skill taxonomy.
3. **Integrity Signals:** Inspects document layout, metadata, textual consistency, issuer information, dates, and obvious manipulation indicators.
4. **Anomaly Flagging:** Highlights inconsistent claims for administrative review.

RESPONSIBLE AI STANDARD: CREDIBILITY & DEFENSIBILITY

AI-assisted document analysis provides integrity and consistency signals and can flag suspicious or manipulated files for review; it is not represented as an absolute guarantee of document authenticity. This balanced approach protects employer trust while establishing an audit trail for candidate credentials.

12.

The Match Score Engine: Precision Shortlist Delivery

Once candidate credentials and competencies are structured into standardized vector representations, the Match Score engine compares them against employer role requirements:

Architectural Precision: The Match Score and ranked shortlisting workflow applies exclusively to **registered MatchOp employers and native offers**. External scraped jobs remain discovery-only links that redirect out to source portals, maintaining a strict distinction between top-of-funnel traffic aggregation and our core monetizable matching engine.

13.

Candidate Product Specifications & Experience

Free Standard Experience

[IMPLEMENTED]

- **Structured Profile Builder:** Normalized degree taxonomy and standardized technical skill input.
- **Document Upload:** Secure CV and credential storage in private Supabase buckets.
- **Transparent Match Score:** Interactive 0–100% fit score on every displayed opportunity.
- **Basic Opportunity Feed:** Standard daily swipe limit for native offers; access to external job feeds.

Student / Graduate Premium

[BUILT ARCHITECTURE]

- **Unlimited Opportunity Discovery:** Bypass standard daily swipe caps for high-velocity job hunting.
- **Granular Preference Drawer:** Filter by geographic radius, remote/hybrid status, and contract types.
- **Priority Intro Placement:** Candidate profile surfaces at the top of the recruiter's Kanban review stack.
- **Expanded Opportunity Access:** Early access to high-demand PFE and junior postings before general release.

14.

Employer Experience & Recruiter Dashboard

Role Publishing & Automated Vectorization

Recruiters post positions through an intuitive 3-step form. The platform instantly parses technical prerequisites, years of experience, degree requirements, and location preferences, creating an immutable requirement vector.

Ranked Kanban Intro Triage

When candidates swipe right, recruiters do not see an unorganized inbox. Profiles appear arranged by algorithmic Match Score, with verified skill badges and integrity indicators prominently highlighted.

Realtime Messaging Channel

Accepting an intro opens a dedicated Supabase Realtime WebSocket chat channel. Recruiter and candidate schedule technical interviews without email friction.

Hiring Funnel Analytics

Recruiters track impressions, candidate swipes, intro acceptances, and time-to-shortlist, providing transparent visibility into candidate pipeline velocity.

15.

Dual Monetization Engine: B2C & B2B Streams

MatchOp operates a balanced, two-sided monetization model designed specifically for North African market realities. We reject both completely free platforms (which lack commercial viability) and restrictive candidate paywalls that choke liquidity:

Stream 1: B2C Student / Graduate Premium

Monthly Subscription: 19 TND / month

Annual Pass (Value Plan): 149 TND / year (~12.42 TND/mo effective)

The annual plan offers an effective ~35% discount compared to 12 monthly payments (149 TND vs. 228 TND), encouraging upfront commitment from ambitious graduates.

*Standard candidate discovery remains accessible for free to preserve marketplace liquidity; premium unlocks power-user features, preference filters, and priority matching.

Stream 2: B2B AI Candidate Shortlisting

Pay-Per-Shortlist: 280 TND / role (~\$90 USD)

Annual Employer Plan: 900 TND / year (~\$290 USD)

The 280 TND fee is not a passive job board listing. It is a full **AI candidate shortlisting service** delivering a top 5–10 pre-screened candidate pool within 48–72 hours with a 14-day replacement guarantee.

*Positioned specifically for Tunisian SMEs (PMEs) and launch-phase companies seeking to eliminate manual screening overhead.

16.

Commercial Pricing & Deliverables Matrix

TIER	PRICE (TND)	TARGET SEGMENT	DELIVERABLES & SERVICE LEVEL AGREEMENT
B2C Free Tier	0 TND	All Students / Graduates	Standard profile, basic daily swipe allowance, external job feed access.
B2C Premium Monthly	19 TND / mo	Active Job Seekers	Unlimited swipes, granular preference filters, priority recruiter queue.
B2C Premium Annual	149 TND / yr	Graduating Seniors / PFE	All monthly features, annual coverage, 35% discount (12.42 TND/mo equivalent).
B2B Pay-Per-Shortlist	280 TND / role	PMEs, ESNs & Launch Firms	Top 5–10 Ranked Candidates, 48–72h SLA, 14d replacement guarantee, chat access.
B2B Annual Employer	900 TND / yr	High-Volume Tech Employers	Annual platform access, multiple role shortlists, dedicated account support.

17. - 18.

Market Sizing: TAM / SAM / SOM

[MARKET DATA] TAM: Pan-MENA HRTech \$350M - \$450M Total annual spending on recruitment software, ATS platforms, and junior sourcing across North Africa and the GCC.	[MARKET DATA] SAM: North Africa Junior Tech \$18.5M - \$25.0M Recruitment and screening budgets specifically allocated for junior developers, PFE interns, and early-career tech talent in Tunisia & Morocco.	[STRATEGIC TARGET] SOM: 3-Year Tunisia Beachhead 350,000 TND Targeting 170+ paying tech employers and 800+ annual premium candidates across Grand Tunis, Sousse, and Sfax.
---	---	--

19. - 20.

Customer Segmentation & Commercial Beachhead

MatchOp concentrates its initial commercial outreach on three primary segments with acute willingness to pay:

1. IT Service Companies & Consultancies (ESNs)

Tunisian ESNs lose senior engineers to European firms at rates of 25–35% annually. Their business model requires steady junior onboarding to maintain project margins. Because they bill international clients in EUR or USD, they possess superior liquidity and readily spend 280 TND to secure qualified junior developers.
2. Labeled Tech Startups & Scale-ups

Tunisia's 1,165 Startup Act companies operate with lean engineering teams lacking dedicated HR departments. Founders and CTOs spend 20+ hours reviewing mismatched CVs; a 280 TND pre-screened shortlist saves high-value executive time.
3. Fast Decision Velocity & Low Enterprise Friction

Unlike multinational corporations entangled in complex procurement cycles and legacy ERPs (SAP SuccessFactors, Oracle HCM), tech founders and SME managers make purchasing decisions in under 14 days, accelerating our pilot conversion velocity.

21. - 22.

Competitive Landscape & Differentiation

Platform	Target Audience	Employer Cost	Screening Model	MatchOp Competitive Advantage
LinkedIn Recruiter	Mid-to-Senior Professionals	\$800+/seat/mo	Keyword search; Recruiter InMail	Optimized for junior capstone verification & local currency pricing.
Keejob / Tanitjobs	Broad National Audience	300-2,000+ TND	Raw resume inundation (2000s UX)	Delivers curated top 5-10 ranked shortlists instead of 300 raw PDFs.
Bayt.com	Corporate Pan-Arab	\$150-\$990/mo	Boolean keyword database	Native 384-dim semantic vector matching with transparent fit scores.
MatchOp	Junior & Early-Career Tech	280 TND/role 900 TND/yr	AI Document Intelligence + Vectors	Cuts screening labor by >75% with 48-72h shortlist delivery SLA.

23. - 24.

Defensibility & Marketplace Liquidity

Real Moats vs. Illusory Claims

- **"We Use AI" is not a moat:** Any competitor can call LLM APIs. True defensibility requires closed-loop operational workflow integration.
- **Proprietary Outcome Feedback:** Tracking which candidate vector profiles convert from swipe to interview to hire creates proprietary training feedback that external competitors cannot replicate.
- **Institutional Campus Lock-In:** Partnerships with university student clubs, Junior Enterprises, and career centers build exclusive supply-side retention.

Solving the Marketplace Cold Start

- **Day 1 Immediate Value:** Over 500+ scraped external opportunities provide instant discovery value to student users upon registration.
- **Campus CV Capture:** Onboarding 3,000+ students via hands-on CV workshops and university club sessions prior to commercial B2B monetization.
- **Concierge Pilot Guarantee:** Offering first-shortlist satisfaction guarantees to 15 pilot employers to prove quality before converting them to recurring plans.

25.

Current Operating Baseline

[VERIFIED FACT]

In accordance with institutional investor standards, MatchOp reports its audited pre-launch operating baseline without inflation:

Audited Database Metrics (September 2026)

- **Registered Candidates:** 0 (Platform in pre-launch staging).
- **Registered Commercial Accounts:** 3 (Active partner profiles).
- **Internal Job Offers:** 3 (Staged test roles for pipeline validation).
- **Verified Commercial Hires:** 0 (Pilot phase scheduled post-funding).
- **Total Platform Revenue:** 0 TND (Pre-revenue stage).

Infrastructure Readiness

- **Production Deployment:** Vercel edge deployment connected to Supabase Cloud.
- **Database Migrations:** 15 migrations executed, including pgvector schema and RLS policies.
- **External Job Ingestion:** Python scraper operational, indexing live opportunities across regional tech hubs.

26.

Early Ecosystem Collaboration Interest

During pre-launch platform testing, three diverse commercial organizations created accounts and expressed collaboration interest, providing valuable qualitative validation of MatchOp's matching concept:

Solution Creative Events

Profile: Events production company.

Interest: Seeking to access creative, operational, and technical event crew talent through the MatchOp matching ecosystem.

Vertical Fit: MatchArtists & MatchTalents crossover.

Nomade Arts

Profile: Cultural space & creative agency.

Interest: Interested in creative and cultural talent opportunities and collaboration aligned with the MatchArtists direction.

Vertical Fit: MatchArtists pioneer partner.

Nexus

Profile: Professional training center.

Interest: Seeking training, student, instructor, and coordinator development opportunities aligned with MatchStudents.

Vertical Fit: MatchStudents pioneer partner.

RIGOROUS COMMERCIAL QUALIFICATION

These relationships represent early collaboration interest and ecosystem validation during the pre-launch phase; they should not be represented as contracted revenue, equity partnerships, or formal corporate subsidiaries unless legally documented. They demonstrate that MatchOp's underlying matching infrastructure addresses demand across diverse sectors.

27. - 29.

The MatchOp Multi-Vertical Vision & Roadmap

MatchOp is engineered as a foundational **opportunity-matching infrastructure**. While preserving strict commercial focus on junior tech recruitment during our initial beachhead, our underlying architecture naturally powers multiple opportunity verticals:

32.

Pro Forma P&L (TND) — Base Case

[FORECAST / MANAGEMENT ASSUMPTION]

The financial model is reconstructed directly from our dual B2C (19/149 TND) and B2B (280/900 TND) monetization architecture, incorporating conservative Tunisian operational assumptions:

FINANCIAL METRIC (TND)	YEAR 1 (VALIDATION)	YEAR 2 (TUNISIA SCALE)	YEAR 3 (REGIONAL EXPANSION)
Registered Candidates / Active MAU	4,000 / 1,600	18,000 / 7,200	45,000 / 18,000
Active Paying B2B Employers	22	75	170
B2C Monthly Subscriptions (19 TND/mo)	6,080 TND	27,360 TND	76,950 TND
B2C Annual Subscriptions (149 TND/yr)	4,470 TND	17,880 TND	56,620 TND
Total B2C Subscription Revenue	10,550 TND	45,240 TND	133,570 TND
B2B Shortlist Fees (280 TND/role)	12,600 TND	44,800 TND	117,600 TND
B2B Annual Employer Plans (900 TND/yr)	9,000 TND	37,800 TND	99,000 TND
Total B2B Employer Revenue	21,600 TND	82,600 TND	216,600 TND
TOTAL GROSS REVENUE	32,150 TND	127,840 TND	350,170 TND
Cost of Goods Sold (Hosting, APIs, Gateway)	(2,750 TND)	(10,240 TND)	(27,170 TND)
GROSS PROFIT (Gross Margin %)	29,400 TND (91.4%)	117,600 TND (92.0%)	323,000 TND (92.2%)
Founder Compensation (Zied & Iheb: 1k TND/mo each in Y1)	(24,000 TND)	(36,000 TND)	(52,800 TND)
Engineering, Product & Regional Staff	0 TND	(24,000 TND)	(128,000 TND)
Sales, Campus Marketing & GTM Operations	(8,500 TND)	(22,000 TND)	(32,000 TND)
Cloud Infrastructure, AI APIs & Tooling	(3,200 TND)	(8,400 TND)	(18,000 TND)
Legal, Accounting & Regulatory Compliance	(4,000 TND)	(6,000 TND)	(14,000 TND)
General Operating Contingency	(2,500 TND)	(4,000 TND)	(9,200 TND)
TOTAL OPERATING EXPENSES	(42,200 TND)	(100,400 TND)	(254,000 TND)
EBITDA / OPERATING RESULT	(12,800 TND)	+17,200 TND	+69,000 TND

33.

Unit Economics & Margin Architecture

Per Shortlist Economics (280 TND)

- Shortlist Revenue: 280.00 TND
- Groq/OpenAI Parsing API: (1.50 TND)
- Payment Gateway (Konnect/Flouci ~2.2%): (6.10 TND)
- Concierge Verification QA: (22.00 TND)
- Net Contribution Margin: 250.40 TND (89.4%)

B2B Customer LTV & CAC Targets

- Estimated Blended CAC: 95 TND (direct founder outreach).
- Annual Repeat Hires: 3.2 roles / employer.
- Customer Retention Horizon: 3.3 Years.
- Projected B2B LTV: 2,630 TND (LTV/CAC ratio: 27.6x).

34.

The 50,000 TND Pre-Seed Validation Ask

[MANAGEMENT INPUT]

MatchOp is raising an agile **50,000 TND (~\$16,200 USD)** pre-seed validation tranche. This capital provides a disciplined 9 to 12-month operating runway, moving MatchOp from its code-complete baseline to verified commercial traction and cash-flow positive operations.

35.

Rebalanced 50,000 TND Use-of-Funds Table

BUDGET ALLOCATION CATEGORY	SHARE (%)	AMOUNT (TND)	DEDICATED MILESTONES ENABLED
Founder Compensation Budget	32.0%	16,000 TND	Dedicated full-time commitment of 2 co-founders (Zied Fatnassi & Iheb Messabi; 1k TND/mo each for 8 months pilot runway).
Product & AI Engineering	23.0%	11,500 TND	Automated shortlist pipeline, document intelligence validation layer, pgvector optimization, and SLA monitoring (<48h).
B2B Sales & Employer Outreach	19.0%	9,500 TND	Direct outreach to 100+ Tunisian PMEs/ESNs; securing 15–20 paying commercial employers and pilot renewals.
Candidate Growth & Campus Clubs	10.0%	5,000 TND	Onboarding 3,000+ candidate profiles via CV workshops across 5 partner universities (Mahdia, Sousse, Monastir, Tunis).
Legal Incorporation & Startup Act	7.0%	3,500 TND	Official registration of MatchOp SAS in Mahdia; filing for Startup Act label; INPDP personal data protection compliance audit.
Cloud Infrastructure & AI APIs	5.0%	2,500 TND	Supabase production tier, vector database indexing compute, Groq LLM extraction tokens, and scraper worker hosting.
Operational Contingency Buffer	4.0%	2,000 TND	Preserving runway buffer for unexpected operational, administrative, or technical expenses.
TOTAL CAPITAL ALLOCATION	100.0%	50,000 TND	Full 9 to 12-Month Pilot Runway to Cash-Flow Positive Scale

36.

Target Validation Milestones

Commercial & Legal Milestones

- Formal incorporation of MatchOp SAS in Mahdia and receipt of Startup Act label.
- Acquisition of 15–20 paying B2B employer accounts generating 280 TND shortlist fees.
- First cohort of paying student premium subscribers at 19 TND/mo and 149 TND/yr.

Platform & Liquidity Milestones

- 3,000+ verified student profiles onboarded with structured degree taxonomies.
- 25+ ranked shortlists delivered within <48h SLA with >60% recruiter interview acceptance.
- Operational validation of AI document intelligence and skill consistency signals.

37.

Institutional Risk Register & Mitigation Strategy

RISK CATEGORY	SEVERITY	MITIGATION STRATEGY	VALIDATION METRIC GATE
Marketplace Cold Start	High	500+ scraped external opportunities live from Day 1; student club distribution partnerships.	Supply ratio > 30 candidates per live opening
B2B Willingness to Pay	Fatal	Sell accessible 280 TND shortlists with 14-day replacement guarantee instead of rigid long-term contracts.	≥ 8 corporate pre-commitments in Month 1
Matching Quality Falloff	High	AI document intelligence combined with founder concierge verification during initial pilot shortlists.	Employer shortlist interview accept rate > 60%
Multi-Vertical Dilution	Fatal	Maintain 100% engineering and sales focus on MatchTalents junior tech beachhead before deploying MatchArtists.	100% resource focus on junior tech in M1-6
Platform Disintermediation	Medium	Monetize upfront shortlist delivery rather than delayed post-hire commissions.	Zero reliance on delayed placement fees

38.

Phased 90-Day Pilot Execution Plan

Month 1: Foundation & Pre-Sales (Days 1–30)

- Complete legal registration of MatchOp SAS in Mahdia.
- Conduct founder outreach to 50 ESNs; secure 10 paid shortlist LOIs.
- Sign collaboration MoUs with 5 university tech clubs.

Month 2: Supply Liquidity (Days 31–60)

- Onboard 3,000+ student profiles via on-campus CV workshops.
- Deploy AI document validation and skill extraction pipeline.
- Deliver first 10 commercial shortlists with <48h turnaround.

Month 3: Delivery & Proof (Days 61–90)

- Complete 25 delivered shortlists and facilitate 15+ confirmed hires.
- Convert pilot employers to 900 TND annual plans.
- Launch B2C Premium tier (19/149 TND) to active students.

39. - 40.

Social Impact & Core Investment Thesis

UN Sustainable Development Goals

- **SDG 4 (Quality Education):** Providing actionable skill feedback to students, bridging the gap between university curriculums and industry demands.
- **SDG 8 (Decent Work & Growth):** Combating Tunisia’s 26.6% graduate unemployment by democratizing access to high-value tech and creative employment.
- **SDG 10 (Reduced Inequalities):** De-biasing recruitment by evaluating verified skill profiles, capstones, and project code rather than elite university pedigree.

The 4-Pillar Investment Thesis

1. **Severe Structural Imbalance:** 26.6% graduate unemployment vs. acute tech brain drain creates urgent demand for screening efficiency.

2. **Production-Ready Asset:** Complete software platform already built and deployed (React 19, Supabase, pgvector, Python scraper).

3. **High Capital Efficiency:** A lean 50,000 TND validation check achieves commercial viability with zero unnecessary overhead.

4. **Multi-Vertical Scalability:** Opportunity infrastructure expandable across MatchTalents, MatchArtists, and MatchStudents.

41. - 42.

Investor FAQ, Next Steps & Governance Contacts

FAQ: Why won't LinkedIn or Keejob crush MatchOp?

LinkedIn monetizes corporate enterprise subscriptions (\$800+/mo) and senior profiles; its keyword search fails on sparse junior resumes. Keejob monetizes job board ad space and benefits from resume volume spam. MatchOp sells guaranteed screening labor reduction: delivering a top 5–10 pre-screened shortlist for 280 TND instead of 300 raw PDFs.

Next Steps (30 Days Post-Funding)

- 1. Execute legal registration of MatchOp SAS in Mahdia.
- 2. Apply for Tunisian Startup Act Label (Smart Capital).
- 3. Open corporate bank account and setup formal accounting.
- 4. Launch 90-day pilot across 5 partner universities.

MatchOp SAS (Incorporation Pending in Mahdia, Tunisia)

Owners & Co-Founders: Zied Fatnassi & Iheb Messabi
